

Extending Workflow Efficiencies to Beyond the Printed Output.

PlanetPress Image, PlanetPress Fax and PlanetPress Search¹ have been bundled as a companion product to PlanetPress Watch and PlanetPress Server, now available as PlanetPress Imaging².

PlanetPress Imaging enables PDF, TIFF and JPG image generation to automatically archive, email and/or fax your variable data documents. An index file is also generated for location and retrieval of specific pages of the print run with PlanetPress Search or by a third party electronic document management (EDM) system.

Simultaneously and seamlessly archive documents created with PlanetPress Design.

Reduce the storage cost and hassle of keeping and misplacing hard copies. Archive the digital images on your server or into your third party document management system. The small file format and highly searchable indexed files streamline the location and retrieval process.

Distribute your documents by email, with no human intervention.

For those customers who prefer communications, such as invoices or statements, via email, set up automated output processes to automatically distribute documents.

Automatically send documents by fax.

PlanetPress Fax, enables output to a fax modem or to a fax server from a host computer, with no human intervention. No need to print first, then manually send the faxes. Streamline your workflow and achieve greater efficiency!

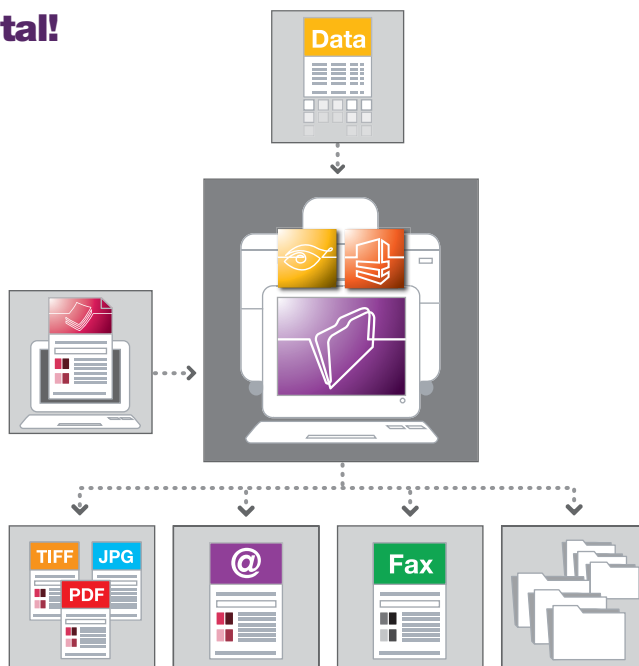

¹ A single licence can be registered and used on all your workstations.

² Requires separate installation and activation of PlanetPress Image, PlanetPress Fax and PlanetPress Search.

Benefits

- Integrates with most EDM systems
- Up to the minute results
- Full control over PDF creation and security settings
- Frees up floor space from file cabinets for better business use
- No more misplaced or lost documents
- Allows for automatic distribution of documents via email and fax
 - Eliminate costs associated with manual fax processing
 - No user intervention required
 - Ability to log files for easy tracking of email and fax activity to ensure communication integrity

Go Digital!

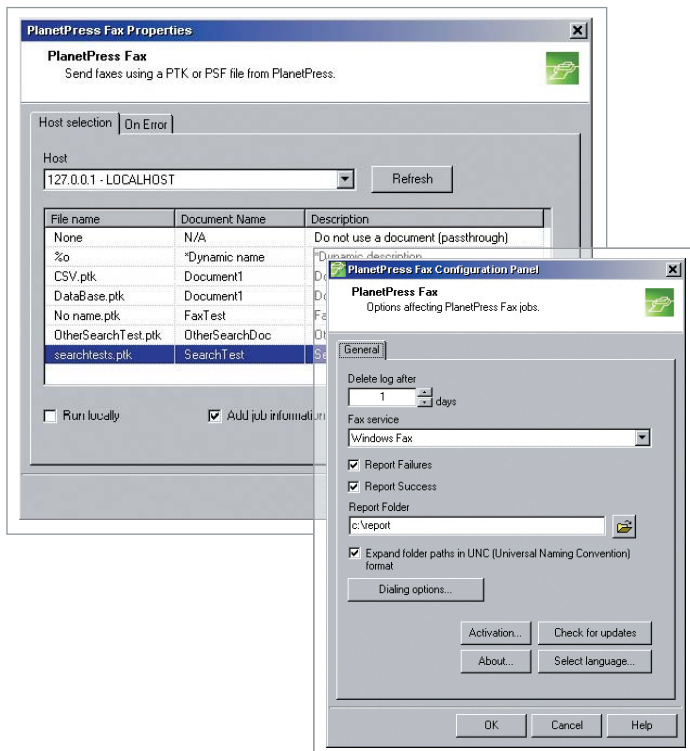

- 1 Create** your transactional, promotional or transpromotional variable content documents and business forms with PlanetPress Design.
- 2 Generate** PDF, TIFF, JPG images of all documents created. Used with PlanetPress Watch or PlanetPress Server, PlanetPress Imaging automatically routes your documents to archive, email or fax.
- 3 Archive** your documents with PlanetPress Imaging to a folder on your server or for automatic integration to your electronic document management system.

Features Overview

- **PDF for email and archive**
The PDF version can look exactly like the original being printed, if there is a printed copy at all, or can be completely different - whatever your preference. Whether you are printing, emailing and archiving, you use the same PlanetPress document.
- **Index file generation**
When designing a variable content document with PlanetPress Design, any number of fields can be tagged as indexes for later search and retrieval using PlanetPress Search. The file structure can be modified to fit the requirements of most third party electronic document management systems.
- **TIFF or PDF output for EDM**
Single or multiple-page TIFF or PDF image output with complete index file, for fast, accurate and automatic integration into third party electronic document management systems.
- **Restricted document access**
Set permission privileges on PDF files, including text modification, text copying, annotation and printing rights.
- **Workflow security**
For increased security and reliability, PlanetPress Imaging runs as a service.
- **Email flexibility**
Use either SMTP or Outlook to send your documents by email.
- **Documentation and online help**
Comprehensive documentation structured to make learning and using all modules easy, efficient and practical.

PLANETPRESS FAX

PlanetPress Fax Properties
Send faxes using a PTK or PSF file from PlanetPress.
